

# QUICK START GUIDE

## THIS GUIDE RELATES TO THE FOLLOWING STYLESHEETS:

**PRODUCT: OS OPEN GREENSPACE**

**DATA FORMAT: GML**

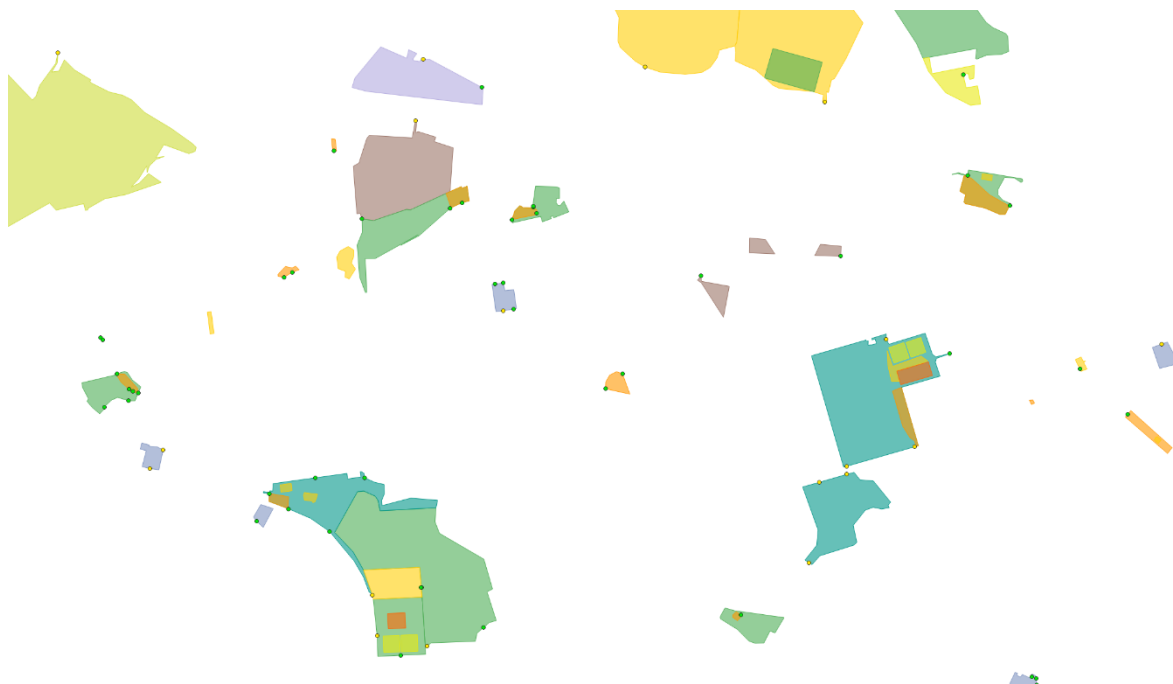

**STYLESHEET FORMAT: STYLED LAYER DESCRIPTORS (SLD)**

The stylesheets have been designed to work with the data loaded into a database, e.g. PostGIS, with fieldnames in full and in lowercase.

- 1 Either fork the stylesheets on [GitHub](#) or [download](#) them and navigate to the directory that matches your data format, stylesheet format and style preference.
- 2 Load your OS Open Greenspace data into GeoServer.
- 3 **Add the styles.** If using the GUI then navigate to Styles > Add a new style > Browse and select the relevant .sld files.
- 4 **Publish these styles with the data.** If using the GUI then navigate to Layers > Add a new resource and choose from the relevant database. Click on publish, configure settings and then choose the matching style before saving.

The scale denominators have been set to allow viewing between 1:2 400 and 1:30 000, although this will vary slightly by resolution.

Your map should look similar to this:

## Compatibility notes

The field names referenced in the SLDs are in full and in lowercase.
