QUICK START GUIDE

THIS GUIDE RELATES TO THE FOLLOWING STYLESHEETS:

## PRODUCT: OS OPEN GREENSPACE

DATA FORMAT: GML

STYLESHEET FORMAT: QGIS STYLESHEETS (QML)

The stylesheets have been designed to work with the data as supplied.

1   Either fork the stylesheets on GitHub or download them and navigate to the directory that matches your data format, stylesheet format and style preference.

2   Open a new, blank map in QGIS.

3   Click on the 'Add Vector Layer' button and navigate to the data folder.

4   Select each of the required layers and click 'OK'.

5   Double-click on each layer in turn to access the 'Layer Properties' window > click on 'Load Style…' > navigate to the directory containing the QML files (those ending .qml) > select the relevant file > click 'Open' > click 'OK'.

We recommend viewing the data between 1:2 400 and 1:30 000 for maximum legibility. We recommend viewing the data with OS OpenMap Local or OS VectorMap District in Backdrop style.

Your data should now look similar to this:

Compatibility notes

We strive to keep our QML files compatible with the latest long-term release of QGIS.
